## DETAILED ACTION

### *Remarks*

1. The objection and rejection, as set forth in the previous Office Action, are withdrawn.
2. Claims 1-16 are pending in the application.

### *Allowable Subject Matter*

3. Claims 1-16 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The closest prior art of record, Moore to US 2003/0038301, teaches a related method, as stated in the previous office Action. In contrast, Moore at least neither teaches nor suggests depositing a layer of *spacer material* that conforms to contours of the anode via and the insulating layer; forming an opening in the insulating layer *without exposing the sidewall edge of the glass electrolyte element*; and depositing a layer of conducting material into the opening to contact *only the central portion* of the surface of the glass electrolyte element. In fact, as illustrated in Fig. 5 in Moore, the opening exposes the sidewall edge of the glass electrolyte element and the conducting material 110 covers the entire top surface and the sidewall edge of the glass electrolyte element (i.e. Ag/Ge<sub>3</sub>Se<sub>7</sub>).

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
